**LogiSync and Sloan Valve Recognized by Smart Business Network
for Green Building Restroom Management Solution**

AVON, Ohio – February 20, 2008 – **LogiSync LLC**, a leading developer and provider of embedded network control systems, and Sloan Valve Company, the world's leading manufacturer of water-efficient plumbing systems, is proud to accept the 2008 *Smart Business Network* eVolution of Manufacturing Honorable Mention Award. The eVolution of Manufacturing awards were developed by Smart Business and MAGNET to recognize Northern Ohio manufacturers that demonstrate excellence in adapting to a changing world.

In a collaborative effort to assist with global initiatives targeted at conserving valuable natural resources, LogiSync and Sloan Valve embarked on an effort to reduce and limit the use of energy and water in commercial restrooms and developed the **Sloan Monitoring System™** (SMS). The SMS combines embedded system-solutions technology with market-leading, high efficiency restroom products and performs monitoring and control of restroom fixtures, such as faucets, soap dispensers, urinals, and water closets, while providing real-time information for water management, predictive maintenance, early warning of critical system failure, and support of efficient resupply activities. The SMS consists of a main controller installed on a wall in the restroom area that communicates with an array of wired and wireless sensors that collect and transmit information from the restroom fixtures to the controller.

The award will be presented on February 28, 2008 at 7:00pm at MAGNET Innovation Center in downtown Cleveland, OH. A feature story on both LogiSync and Sloan Valve will be published in the February Cleveland and Akron/Canton issues of Smart Business.

About LogiSync LLC

Established in 1993, LogiSync is a leader in the development, manufacture and supply of networked embedded control systems. Drawing on a wealth of standard products and design expertise, LogiSync offers customer tailored solutions for the medical, telecommunications, building automation, transportation, process control, and other industry-related markets. For more information about LogiSync, please visit www.logisync.com.
